

A Unified Account of the Infinitive Absolute in Biblical Hebrew

Elizabeth Cowper and Vincent DeCaen, University of Toronto

2nd Workshop on Biblical Hebrew Linguistics and Philology

Hebrew University of Jerusalem, June 2018

1. Introduction

- Based on prior work (DeCaen 1995, 2014; Cowper and DeCaen 2017), and reporting on work in progress, we propose a unified syntactic account for the Biblical Hebrew (BH) infinitive absolute IA).
- In addition to the constructions usually included (Waltke and O'Connor 1990, Harbour 1999, Hataav 2017), where the same verb root appears as the infinitive absolute and as the main verb of the clause, we extend the account to cases where the two verbal forms have different roots, and to conjoined verbal projections where only the first verb bears the clausal inflection.
- We argue that the infinitival phrase merges as a phrasal modifier of a verbal projection (vP or VoiceP), and that its surface position depends on independently motivated movements of either the main verb or the infinitival phrase. Contra Harbour (1999, 2007), we argue that the infinitival phrase is a full XP, rather than a head.
- We hypothesize that the infinitive absolute form is the default spellout for a verb bearing no inflectional features, predicting that it might appear in other constructions as well.
- We show that same form indeed appears in certain coordinate constructions that exhibit a pattern parallel to first-conjunct agreement. We propose that these constructions involve VoiceP conjunction, where only the first conjunct moves to the relevant inflectional head, leaving the second conjunct to be spelled out with the default form.

2. The phenomenon

2.1 Sources of data

- A database of approximately 875 infinitives in total, extracted from BibleWorks (4.0.034d(1998) with MORPH 3.0), supplemented by MORPH 4.20.¹ Approximately 420 of these were from Standard Biblical Hebrew (SBH) (Genesis through 2 Kings).
- The data were also supplemented by tokens gleaned from the literature (Hataav 2017 counts 266 tokens of “tautological” infinitive absolute in SBH)
- All translations here are from the King James Version (KJV)

2.2 Properties of the Infinitive Absolute:

- Traditionally, the construction is defined as involving reduplication of the root and possibly also the binyan of the main verb of the clause (Hataav's 2017 *tautological infinitive*). When the two verbs appear in different binyanim, the infinitive overwhelmingly takes the *pa'al* form (Harbour 1999).

¹ The data were cleaned so as to exclude misparsed examples.

- (1) Same root, same binyan: ואֲבִיהָ יָרָק בְּפָנֶיהָ (Num 12:14)
 wəʔābīhā // **yārōq** yāraq *pro* bəpānēhā
 and her father // **spit/IA** he spit *pro* in her face
 ‘If her father **but** spit in her face’
- (2) Same root, different binyan (IA as plain qal/pa'al): אֶךָ טָרַף טָרַף וְלֹא רָאִיתִי עַד־הַנֵּה (Gen 44:28, cited by Harbour 1999: 167)
 ṭārōp tōrāp wəlōʔ rəʔîtiw ʕad-hēnnā
tear/IA torn-apart.3MSG and not saw.1SG until now
 ‘Surely he is torn in pieces; and I saw him not since’
- While the infinitive phrase frequently consists only of a single word, it can also take arguments or modifiers.
- (3) PP modifier: וַיִּשְׁבְּעוּ הַכֹּהֲנִים נִשְׁאִים ... הַלְלִים הַלֹּחַ וְתַקְעוּ בַּשּׁוֹפָרוֹת (Josh 6:13)
 wəʕšibʕā hakkōhānīm nōšəʔīm hōləkīm [hālōk wəṭāqōaʕ baššōpārōt]
 and-seven the priests carrying going go/IA and-sound/IA on the trumpets
 ‘And seven priests bearing ... went on continually, and **blew** with the trumpets’
- (4) PP modifier and DP direct object: אֶעֱבֹר בְּכָל־צֹאנֶךָ הַיּוֹם הַזֶּה מִשָּׁם כָּל־שֶׁהוּא (Gen 30:32)
pro ʔeʕēbōr bəkol-šōʔnkā hayyôm hāsēr miššām kol-šeh³
 I will pass among all your flock today remove/IA from there every sheep
 ‘I will pass through all thy flock to day, **removing** from thence all the sheep’
- (5) Pronominal direct object and PP modifier: וַיִּמְדְּדֵם בַּחֶבֶל הַשֵּׁנֵב אוֹתָם אֶרְצָה (2 Sam 8:2)
 wayəṃaddədēm *pro* baḥēbel haškēb ʔōtām ʔāršā
 and-he measured with the cord make lie down/IA them on-ground
 ‘and measured them with a line, **casting them down** to the ground’
- The infinitive absolute can also occur in conjoined constructions:
- (6) Two conjoined infinitives modifying the main clause: הַלֹּחַ וְשִׁפְףָּ תֵלַכְנָה (Isa 3:16)
 hālōk wəṭāpōp tēlāknā
 go/IA and-trip/IA they(F)-go
 ‘walking and mincing as they go’
- (7) Infinitive absolute conjoined with an inflected infinitive: וַיֵּשֶׁב הָעָם לֶאֱכֹל וּשְׂתוֹ (Ex 32:6)
 wayyēšeb hāʕām leʔēkōl wəšātō
 and then sat the people to eat and drink/IA
 ‘and the people sat down to eat and to drink’
- (8) Infinitive absolute conjoined with a finite verb: וַיִּתְקְעוּ בַּשּׁוֹפָרוֹת וַנִּפְּץ הַכִּדִּים אֲשֶׁר בְּיָדָם: (Judges 7:19)
 wayyitqəʔû baššōpārōt wənāpōš hakkaddīm ʔāšer bəyādām
 and they blew on the trumpets and-break/IA the jars that in their hand
 ‘and they blew the trumpets, and **brake** the pitchers that were in their hands’
 (both activities at the same time)
- The infinitival phrase never contains an overt subject.

² Read ותקעו as the IA wəṭāqōaʕ.

³ The object here has been abbreviated, and the inverted order is the result of heavy XP shift.

- The infinitive absolute can occupy a variety of positions in the main clause:

(9) At/near the end of the clause:

- a. כִּי־תִשְׁתָּרֵר עָלֵינוּ גַם־הַשְׁתָּרֵר:
kî- pro tištārēr ʕālênû gam-hištārēr (Num 16:13)
 for you would lord over us even **lord/IA**
 ‘except thou make thyself **altogether** a prince over us?’
- b. אֵלַי יֵצֵא יָצֹא
ʔēlay yēšēʔ yāšôʔ (2 Kgs 5:11)
 to me he comes out **come out/IA**
 ‘He will **surely** come out to me’
- c. וְאֶת־צִלְמֵי שִׁבְרוּ הַיֵּטֵב
wəʔet-ʕəlāmāyw šibbərû hêṭēb (2 Kgs 11:18)
 and their idols they smashed **do well/IA**
 ‘and his images brake they in pieces **thoroughly**’
- d. וַיִּשְׁטְחוּ לָהֶם שְׂטוֹחַ סְבִיבוֹת הַמַּחֲנֶה:
wayyištəḥû lāhem šāṭôaḥ səbîbôt hammaḥāneh (Num 11:32)
 and spread to them **spread/IA** around the camp
 ‘and they spread them **all abroad** for themselves round about the camp’

(10) Directly after the main verb:⁴

- a. הֲרֹגִי נָא הָיָה אִם־מָצָאתִי חַן בְּעֵינֶיךָ
horgénî nāʔ hārōg ʔim-māšāʔtî hēn bəʕênēkā (Num 11:15)
kill me now **kill/IA** if I found favour in your eyes
 ‘kill me, I pray thee, **out of hand**, if I have found favour in thy sight’
- b. שָׁמְעוּ שְׁמוֹעַ מִלְתִּי
šimʕû šāmôaʕ millātî (Job 13:17 = 21:2)
listen! **listen/IA** my word
 ‘Hear **diligently** my speech’
- c. לָמָּה הַעֲבַרְתָּ הָעָבִיר אֶת־הָעָם הַזֶּה אֶת־הַיַּרְדֵּן
lāmâ hēʕābártā haʕābîr ʔet-hāʕām hazzeh ʔet-hayyardēn (Josh 7:7)
 why you brought across **bring across/IA** the people the this the Jordan
 ‘wherefore hast thou **at all** brought this people over Jordan’

(11) Directly before the main verb:

- a. שְׁמֹר תִּשְׁמְרוּן אֶת־מִצְוֹת יְהוָה אֱלֹהֵיכֶם
šāmôr tišmərûn ʔet-miʕwōt ʔādōnāy ʔēlōhêkem (Deut 6:17)
keep/IA you shall keep commandments of my lord your god
 ‘Ye shall **diligently** keep the commandments of the LORD your God’

⁴ We assume that *nāʔ* in (10a) originates in sentence-initial position and moves to a position after *horgénî* for prosodic reasons.

- b. זָכַר תִּזְכֹּר אֶת אֲשֶׁר-עָשָׂה יְהוָה אֱלֹהֶיךָ לְפָרְעָה
 zākōr tizkōr ʔēt ʔāšer-ʕāsâ ʔādōnāy ʔēlōhēkā ləparʕōh (Deut 7:18)
 remember/IA you must remember that did my lord your god to Pharaoh
 ‘but shalt **well** remember what the LORD thy God did’

- c. הָלֹךְ וְטָפַף תֵּלַכְנָה
 hālōk wəṭāpōp tēlāknâ (Isa 3:16)
 go/IA and trip/IA they(F) walk
 ‘**walking** and **mincing** as they go’

(12) As the only verbal element in the clause:

- a. שָׁמֹר אֶת-יְוֹם הַשַּׁבָּת לְקֹדֶשׁ
 šāmōr ʔet-yôm haššabbāt ləqaddəšō (Deut 5:12; cf. Deut 16:1, 27:1)
 keep/IA day the sabbath to make it holy
 ‘**Keep** the sabbath day to sanctify it’

- b. זָכַר אֶת אֲשֶׁר-עָשָׂה יְהוָה אֱלֹהֶיךָ לְמִרְיָם
 (Deut 24:9; cf. Ex 13:3, 20:8, Deut 24:9, 25:17, Josh 1:13)
 zākōr ʔēt ʔāšer-ʕāsâ ʔādōnāy ʔēlōhēkā ləmiryām
 remember/IA that did my lord your god to Miriam
 ‘**Remember** what the LORD thy God did unto Miriam’

3. Prior accounts

In general, prior discussions of the infinitive absolute consider only those where the infinitive and the main verb of the clause have the same root.

Traditional accounts (e.g. Waltke and O’Connor 1990) simply list the various IA constructions, attributing different placement of the infinitive absolute to factors like emphasis.

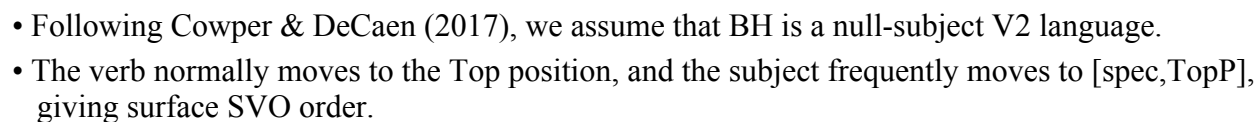

Generative approaches (Harbour 1999, 2007, 2008; Hatav 2017) also focus exclusively on the reduplicative construction, where the same verb root appears in the infinitive and in the main verb of the clause.

- Harbour (1999, 2007, 2008) analyses them as predicate clefts, with the infinitive absolute spelling out the trace of a moved verb. If the copy includes v^0 , which for Harbour determines the binyan, then the two verbs appear with the same binyan. If only the verb root appears in the copy, then the default *pa`al* form appears due to a morphological repair operation.
 - This account inherently cannot be extended to include forms with different verb roots.
 - Since the construction is derived by head movement, it also cannot accommodate instances where both the main verb of the clause and the infinitive are fully phrasal and have their own arguments.

- (13) PP modifier and DP direct object: אָעֱבֹר בְּכָל-צֹאֲנֶךָ הַיּוֹם הַזֶּה מִשָּׁם כָּל-יְשֻׁהוּ
 pro ʔeʕēbōr bəkol-šōʔnkā hayyôm hāsēr miššām kol-šeh (Gen 30:32)
 I will pass among all your flock today **remove/IA** from there every sheep
 ‘I will pass through all thy flock to day, **removing** from thence all the sheep’

- Hatav’s (2017) focus is primarily on the information-structural properties of the construction; she does not provide an explicit syntactic analysis.

(14)

- Sometimes the subject in [spec,TopP] is phonologically null, giving apparent V1 order.

- 5

- b. wə-*pro* kārat ʔet-hāʔāšērā
and-3MSG cut down ACC-Asherah
'and cut down the groves.'

וַכַּרַת אֶת־הָאֲשֵׁרָה
(2 Kings 18:4)

- Sometimes something other than the subject moves to [spec,TopP], leaving the subject *in situ* and giving verb-subject order.

- (17) בְּרֵאשִׁית בָּרָא אֱלֹהִים אֶת הַשָּׁמַיִם וְאֶת הָאָרֶץ:
bərēʔšît bārāʔ ʔēlōhîm ʔēt haššamáyim wəʔēt hāʔāreš (Genesis 1:1)⁵
in-beginning created God the heavens and the earth
'In the beginning God created the heaven and the earth.'

- Sometimes there is phonologically overt material in projections above TopP, giving apparent V3 order.

- (18) a. הָאִישׁ אֲשֶׁר נִמְצָא הַגִּבִּיעַ בְּיָדוֹ הוּא יְהִיָּה לִי עֶבֶד
[hā-ʔîš ʔāšer nimšāʔ haggābîaʕ bəyādô] hûʔ yihyeh -llî ʕébed (Gen 44:17)
the-man that found the cup in his hand he will be to.me slave
'but the man in whose hand the cup is found, he shall be my servant'
- b. כִּי אֶת־כָּל־הָאָרֶץ אֲשֶׁר־אַתָּה רֹאֶה לְךָ אֶתְנַנֶּה
[kî ʔet-kol-hāʔārešʔāšer ʔattâ rōʔeh] ləkā ʔettənnənnâ (Gen 13:15)
for all the land that you see to-you I will give
'For all the land which thou seest, to thee will I give it.'

- Sometimes the verb moves past Top⁰ to a higher head, giving true V1 order. In (19), the verb has moved as far as the jussive Force head (Cowper and DeCaen 2017).

- (19) a. yāʔēr ʔādōnāy yāʔēr pānāyw ʔēlékā יָאֵר יְהוָה פָּנָיו אֵלַיָּךְ וַיִּתְנֶנְךָ:
shine my lord his face to you (Num 6:25)
'the LORD make his face shine upon you.'
- b. wəyāšēm *pro* yāšēm ləkā šālôm וַיִּשֶׁם לְךָ שָׁלוֹם:
and-give *pro* to-2MSG peace (Num 6:26)
'and [the LORD] give you peace.'

5. Our proposal

5.1 The infinitive absolute is a verbal projection (VoiceP or vP).

- Evidence that it is phrasal, not a head (cf. Harbour 1999):
– The infinitive can take both phrasal modifiers of its own, and nominal arguments.

- (20) a. אֶעֱבֹר בְּכָל־צֹאנֶךָ הַיּוֹם הַזֶּה מִשָּׁם כָּל־שֶׂה
pro ʔeʕēbōr bəkol-šōʔnkā hayyôm [pro hāsēr miššām kol-šeh⁶]
I will-pass among all your flock today *pro* remove/1A from there every sheep
'I will pass through all thy flock to day, **removing** from thence all the sheep'

⁵ The Hebrew text follows the Leningrad codex and its Tiberian vocalization, a standard version sufficient for our purposes here (but see Khan, 1987, 1996). Where the word stress does not fall on the final syllable, an acute accent is added for clarity. The systematic post-vocalic spirantization of stops is omitted.

⁶ The object here is abbreviated to make the structure clearer; the inverted order is the result of heavy XP shift.

b.

wa-yəṃaddədēm *pro* baḥébel [PRO **haškēb** ʔōtām ʔāršâ] (2 Sam 8:2)
 and he measured *pro* with the cord PRO **make lie down/IA** them on-ground
 ‘and measured them with a line, **casting them down** to the ground’

- Evidence that the infinitive consists of no more than VoiceP:
 - It cannot take an overt subject: there is no mechanism internal to the infinitival clause that would case-license a subject.
 - The infinitival verb is initial in the infinitival phrase, suggesting that it is not dominated by an inflectional head with an EPP feature.
 - It cannot bear clitics (though it can take overt nonsubject arguments, and be modified). This is unsurprising if clitics are hosted by an inflectional head above Voice. VoiceP can accommodate full overt DP (internal) arguments, but not clitics.

5.2 The infinitive absolute modifies a verbal projection (VoiceP or vP).

- Evidence that it merges no higher than VoiceP:
 - The IA surfaces below grammatical aspect when it remains in situ in (21).
 - We assume that the participle spells out progressive aspect, as in English (DeCaen 1995).
 - Since there is no marked tense feature to be spelled out in (21), the clause contains no finite auxiliary.

- (21) a. וְשִׁבְעָה הַכֹּהֲנִים נֹשְׂאִים ... הַלְלִים הַלֹּחַ וְתִקְעוּ בַשּׁוֹפָרוֹת (Josh 6:13)
 wəšibṣâ hakkōhānīm nōšəʔīm [AspP hōləkîm [IA **hālôk** wəṭāqôaʃ baššôpārôt]]⁷
 and seven the priests carrying going **go/IA** and **sound/IA** on the trumpets
 ‘And seven priests bearing ... went on **continually**, and **blew** with the trumpets’
- b. hēmmâ [AspP hōləkîm [IA **hālôk** wədabbēr]] הֵמָּה הַלְלִים הַלֹּחַ וְדַבְּרָה
 they going **go/IA** and **talk/IA** (2 Kgs 2:11)
 ‘as they **still went on**, and **talked**’

- When the IA remains *in situ*, it surfaces at or near the end of the clause, followed only by other adjuncts, as expected if it is an adjunct to either vP or VoiceP.

5.3 The infinitive absolute, like other XPs, can move.

- It can move to [spec,TopP]. Then it appears directly before the verb, which is in Top.

- (22) זָכֹר תִּזְכֹּר אֶת אֲשֶׁר-עָשָׂה יְהוָה אֱלֹהֶיךָ לְפָרְעָה
 zākōr tizkōr ʔēt ʔāšer-ʕāšâ ʔādōnāy ʔēlōhēkā ləparʕōh (Deut 7:18)
remember/IA you must remember that did my lord your god to Pharaoh
 ‘but shalt **well remember** what the LORD thy God did’

- The verb can move higher, to a functional head above [spec,TopP]. This leaves the infinitive absolute, still in [spec,TopP], immediately after the verb. In (23), the *wh*-word occupies [spec,ForceP], the verb has moved to Force, and the infinitive absolute is in [spec,TopP].

⁷ Read ותקעו as the IA ותקוע wəṭāqôaʃ.

(23)

לָמָּהּ הֵעָבַרְתָּ הָעָם הַזֶּה אֶת־הַיַּרְדֵּן
(Josh 7:7)

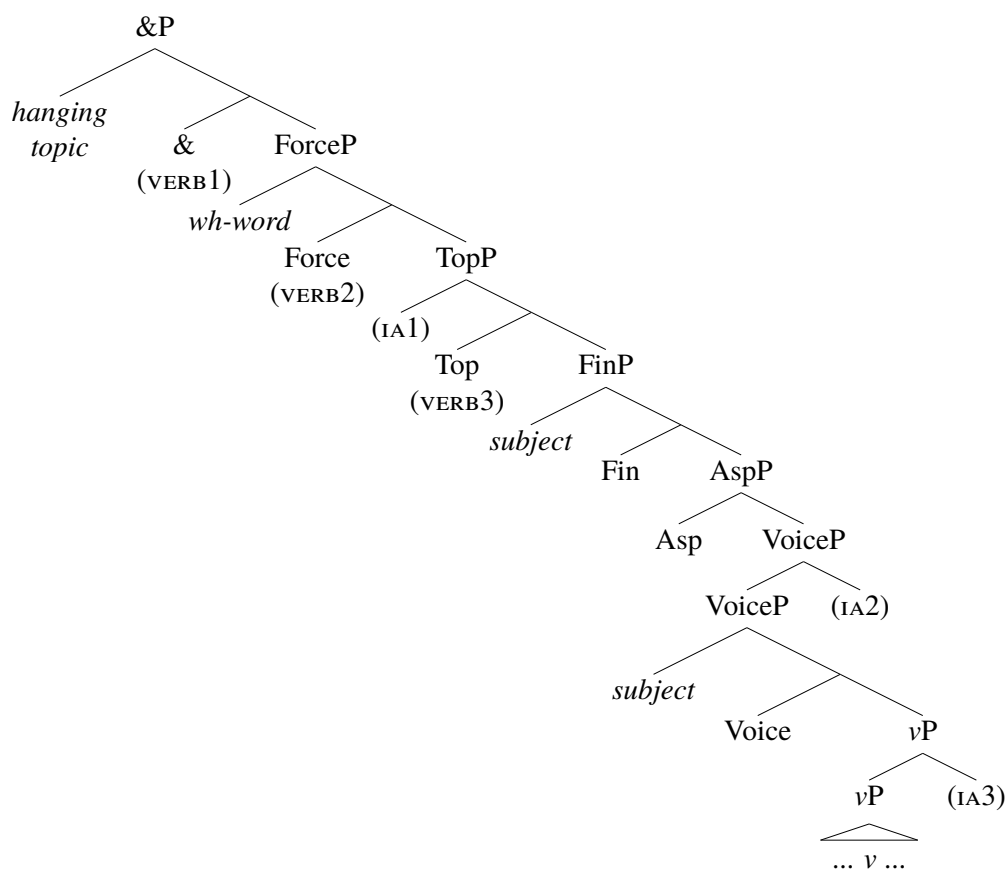

lāmâ hēṣābārtā haṣābîr ʔet-hāʕām hazzeh ʔet-hayyardēn
why you brought across **bring across/IA** the people the this the Jordan
'wherefore hast thou **at all** brought this people over Jordan'

- A hanging topic can appear in the highest specifier position, [spec, &P]. This can result in a variety of orders, depending on what has moved to [spec,TopP], and how far the verb has moved.

(24) kol-ʕōmāsêhā šārôṭ yiśśārētû כָּל־עֲמָסִיָּה שָׂרוּט יִשָּׁרְטוּ
all burdening with it **cut/IA** they will be cut (Zach 12:3, cited by Harbour 1999: 169)
'All that burden themselves with it shall be cut in pieces.'

The tree in (25) shows all the possible positions of the finite verb and the infinitive absolute.

(25)

- This structure, together with the movements listed in (26), along with the possibility that the subject may be overt or phonologically null, derives all the observed word orders.
- The movements in (26a–c) are argued for by Cowper & DeCaen (2017), independently of the infinitive absolute construction.
- The movement in (26d) is also not specific to the infinitive absolute construction; it is just a special case of movement of a nonsubject XP to the clausal topic position, also discussed in Cowper & Decaen (2017).

- (26) a. Finite verb moves to Top (ordinary declarative sentence)
 b. Finite verb may move from Top to Force or another C-head (questions, exclamatives)
 c. Finite verb may move to & (narrative inversion)
 d. IA may move to [spec,Top]
- The information-structural differences that correlate with the surface position of the IA can be attributed to the factors that influence which of these independently motivated movements take place, such as the topicality of the IA itself (see Hataav 2017) and the presence or absence of marked features of heads above TopP.

6. Interim summary

- We have argued that the syntax of the infinitive absolute construction can be understood quite straightforwardly in terms of the clausal syntax of Biblical Hebrew, and that no construction-specific syntactic processes or structures are required.
- We have not so far said anything about either the morphological shape of the IA or the mechanism deriving the so-called tautological infinitive, i.e. those cases where the IA reduplicates the main verb of the clause, and carries meanings often described as emphasis (“intensifying infinitive” Waltke and O’Connor 1990: §35.3.1b). Before turning to these, we first discuss another kind of construction in which the IA form appears.

7. Coordinate structures and the infinitive absolute

- (27) Two conjoined infinitives absolute modifying the main clause: הָלֹךְ וְטָפַף תִּלְכְּנָה
hālôk wəṭāpōp tēlāknâ (Isa 3:16)
go/IA and-trip/IA they(F) go
 ‘**walking and mincing** as they go’

- The IA forms in (27) are accounted for by the analysis already presented: the conjoined IA forms are an adjunct to the matrix VoiceP, and have moved as a constituent to [spec,TopP].

- (28) Infinitive absolute conjoined with an inflected infinitive: וַיֵּשֶׁב הָעָם לֶאֱכֹל וְשָׂתוּ
 wayyēšeb hāʿām leʔēkōl wəššātô (Ex 32:6)
 and then sat the people to eat **and drink/IA**
 ‘and the people sat down to eat **and** to **drink**’

- Here, the IA form is conjoined with a full infinitival form, and is not interpreted as a modifier. Given the meaning, one might expect both ‘to eat’ and ‘drink’ to be expressed with the regular infinitive, as they are in (29).

- (29) וְאֵנִי אָבוֹא אֶל-בֵּיתִי לֶאֱכֹל וְלִשְׁתּוֹת וְלִשְׁכַּב עִם-אִשְׁתִּי
 waʔānî ʔābôʔ ʔel-bêtî leʔēkōl wəliššôt wəliškab šim-ʔiššî (1 Sam 11:11)
 and.I will.go to-my.house to.eat **and.to.drink and.to.lie** with-my.wife
 ‘shall I then go into mine house, to eat and to drink, and to lie with my wife?’

- (30) Infinitive absolute conjoined with a finite verb: וַיִּתְּקֵנוּ בַּשּׁוֹפָרוֹת וַנִּפְּזָה הַכַּדִּים אֲשֶׁר בְּיָדָם: (Judges 7:19)

wayyitqəʔû baššôpārôt wənāpôš hakkaddîm ʔāšer bəyādām
 and they blew on the trumpets and-break/IA the jars that in their hand
 ‘and they blew the trumpets, and brake the pitchers that were in their hands’
 (both activities at the same time)

- As in (28), (30) shows an IA form in what appears to be a conjoined verb phrase, where the other conjunct takes a different form – here a finite verb. Again, one might expect both verbs in this example to bear the same (finite, in this case) inflection, as can be seen in (31).

- (31) וַיִּבֶּא אֲחִירָהּ אֵלָיו וַיִּשְׁאַל דָּוִד לְשָׁלוֹם יוֹאָב
 wayyābōʔ ʔūriyyā ʔēlāyw wayyišʔal dāwīd lišlôm yôʔāb (2 Sam 11:7)
 and.then.he.came Uriah to.him and.he.asked David about.welfare.of Joab
 ‘And when Uriah was come unto him, David demanded of him how Joab did’

What needs to be explained in both of these examples is why the two verbs do not carry the same inflection, and why the second conjunct in both examples takes the particular form that it does.

7.1 A similar phenomenon: first-conjunct agreement

- In a variety of languages, coordinate structures display asymmetric agreement patterns (McCloskey 1986, Munn 1999, Doron 2000, Bošković 2009, many others).
- A typical pattern is for the verb to agree with only the first conjunct of a postverbal subject:

- (32) mšat kull mra w xu-ha Moroccan Arabic
 left.F.SG each woman and brother-her (Munn 1999: 653)
 ‘Each woman and her brother left.’

- Current syntactic accounts of coordinate structures treat them as asymmetric, with the first conjunct occupying a higher position than the second. Various versions have been proposed:

- (33) a. Standard X-bar view: 1st conjunct in [spec,&P]
 DP & DP
 / \
 &P
 / \
 DP & DP
- b. Munn's (1993) Boolean phrase, adjoined to NP
 NP
 / \
 NP BP
 / \
 B NP

- Roughly speaking, first-conjunct agreement can happen with postverbal subjects because the first conjunct is structurally closer to the head hosting the preposed verb.
- Details vary from account to account, but the common thread is that agreement holds between a c-commanding head and the higher of two conjoined constituents, as schematized in (34).

7.2 First-conjunct inflection: the relation between a higher inflectional head and a coordinate verbal phrase

We propose that a similar mechanism is responsible for the asymmetric inflectional patterns in (28) and (30).

- Each verb moves to its own Voice head.
- The first verb then moves to the inflectional head.
- The second verb remains in Voice, and is spelled out with whichever binyan Voice provides.
- The subject of the first verb moves to the specifier of the inflectional head; the second subject is not case-licensed and cannot be overt. It can, however, be referentially distinct from the first subject, as in (36).

(36) וַיִּקְרְאוּ לְפָנָיו אֲבָרָה וְנָתַן אֹתוֹ עַל כָּל-אֶרֶץ מִצְרָיִם
(Gen 41:43 KJV)

wayyiqrəʔû *pro* ləpānāyw ʔabrək wə**nātôn** *pro* ʔōtô ʕal kol-ʔéreʕ miʕrāyim
and shouted *pro* before him kneel and **give**/INF *pro* him over all land of Egypt
'and they [people] cried before him, Bow the knee: and he [Pharaoh] **made** him [Joseph]
ruler over all the land of Egypt'

- This account predicts that if both subjects are phonologically overt (i.e., overt full pronouns or DPs), the coordinate structure will include higher, inflectional categories like FinP or AspP. (31) above is an example of such a structure.

- Unsurprisingly, sentences of this form occur with the conjunction 'and', but also with the disjunction 'or', as in (37).

(37) a. וְכִי-תִמְכַּרְוּ מִמֶּכָר לְעַמִּיתְךָ אוֹ קָנָה מִיַּד עַמִּיתְךָ
wə-kî-timkərû mimkār laʕāmîtekā ʔô **qānōh** miyyad ʕāmîtekā (Lev 25:14)
and-if you sell sale to your neighbour or **buy**/INF from hand of your neighbour
'And if thou sell ought unto thy neighbour, or buyest ought of thy neighbour's hand'

b. אִישׁ כִּי-יִדְּוֹר נָדָר לַיהוָה אִוִּיהֶשְׁבַּע שְׁבָעָה
ʔiš kî-yiddōr néder laʔdōnāy ʔô **hiššābaʕ** šəbūʕā (Num 30:3[2] KJV)
man that vows vow to my lord or **swear**/INF oath
'If a man vow a vow unto the LORD, or swear an oath'

7.3 Infinitive absolute as a default verbal spellout

- Why is the second-conjunct verb spelled out with the same form as the infinitive absolute?
 - We propose that the IA form is what surfaces when a verb cannot move to (or form an Agree relation with) an inflectional head (Asp, Fin, Tense, etc.).
 - Under a realizational view of morphology such as Distributed Morphology (Halle and Marantz 1993, a.o.), the IA form is thus the default inflectional spellout of a verbal head, just as (following Harbour 1999, 2007) *pa`al* is the default *binyan* for a verb that cannot move to or form an Agree relation with a Voice head.

8. Conclusion and remaining questions

- We have argued that the infinitive absolute construction consists of a verbal projection (vP or VoiceP), modifying another verbal projection. Syntactically, the infinitive absolute behaves just like other phrasal modifiers, in that it sometimes moves to [spec,TopP].
- The tautological infinitive construction is a special case of this more general construction.
- The morphological form of the infinitive absolute is the default inflectional form taken by a verb with no access to an inflectional head. It is found, not only in VoiceP/vP modifiers, but also as the second of two conjoined VoicePs, where only the first verb moves to the inflectional head position.
- We have taken no position here on the mechanism by which the verb root is copied in the tautological infinitive, though we have ruled out Harbour's account, in which the tautological infinitive is the spellout of the trace of a moved verb.

- We have nothing new to say about cases like (12), where the infinitive absolute is the only verb in the clause. It can be noted that these examples are highly formulaic, and that for each of them, a close counterpart can be found that also contains a finite verb.
